

SUMMARY

Computer Science graduate who bridges AI and technology with real-world constraints. I balance software ideas with production guardrails and love building tangible solutions, from full-stack apps that optimize business processes to physical hardware prototypes. Driven by curiosity, I love translating messy requirements into working systems.

EDUCATION

B.Sc. Computer Science — 110/110

Diploma in Computer Science and Telecommunications — 100/100

University of Pisa

ITIS Tullio Buzzi, Prato

EXPERIENCE

Mobile Software Engineer Intern

Famalabs

09/2025 – 12/2025

- Developed a **Mistral AI conversational assistant** (Vercel AI SDK, Zod guardrails) for therapy scheduling and mood tracking (core of my Bachelor’s thesis on making AI safe and predictable in production).
- Ported a dynamic survey engine to mobile (React Native, Expo, TypeScript) and designed end-to-end type-safe backend integrations via RTK Query and OpenAPI.

Mobile App Developer | Contractor

Midable S.r.l.

2023 – 2024

- Translated messy client requirements into a cross-platform app (‘Okidoki Secondhand’) using Nuxt.js and Capacitor, wiring frontend components to SQL databases via REST APIs.
- Owned the full development lifecycle as a contractor, from proposing technical solutions to deployment and feedback integration.

Web Developer | Contractor

Pentaqo S.r.l.

2023

- Built a web application to automate corporate certification workflows (e.g. ISO standards), connecting UI features to backend services and databases.

Software Developer Intern

Forensis-Lab

2018 – 2019

- Developed C#/.NET data-recovery and file-parsing utilities for digital forensic investigations, operating in a field where accuracy is critical.

SELECTED PROJECTS

Revenue Leakage Defender

github.com/1boch1/revenue-leakage-defender

Python, FastAPI, LangGraph, Pydantic, React

- Developed a GenAI tool that automates invoice verification against contracts, preventing revenue leakage.
- Architected hybrid deterministic/probabilistic workflows with **LangGraph** and **Pydantic** to reliably detect pricing discrepancies and violated clauses.
- Integrated PDF text extraction and a minimal frontend to auto-generate dispute reports and draft claim emails.

Leap Motion Robot Arm

github.com/1boch1/leap-motion-robot-arm

Arduino, CNC shield, stepper motors, JS

- Mapped real-time Leap Motion hand tracking to Arduino-driven stepper motor kinematics, building an end-to-end bridge between software inputs and physical actuation.

TECHNICAL SKILLS

Programming	Python, TypeScript/JavaScript, C, C#, Java, SQL
Frontend	React, React Native, Vue/Nuxt, Svelte, Tailwind CSS, Expo, Capacitor
Backend & AI	FastAPI, Node.js, LangGraph, LLM APIs, Pydantic, Vercel AI SDK, Zod ...
Data & Tools	REST APIs, MySQL, Supabase, Git, CI/CD, Jest, Agile methodologies
Hardware	Arduino, Raspberry Pi, ESP32, 3D printing, laser cutting, physical prototyping
Spoken	Italian (native), English (professional working proficiency)
